## **DETAILED ACTION**

### ***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 are drawn to a method for promoting animal health with an animal feed containing an anti-bacterial fatty acid, classified in class 514, subclasses 546, 546, 558 and 560.
- II. Claims 10-18 are drawn to an animal feed composition comprising an anti-bacterial fatty acid component, classified in class 426, subclass 6.
- III. Claims 19-21 are drawn to a method for reducing the antibiotic content of an animal feed by replacing all or a portion of the antibiotic in the animal feed with an anti-bacterial fatty acid component, classified in class 514, subclasses 546, 547, 558 and 560.

The three inventions are independent and distinct, each from the other as they have acquired a separate status in the art as shown by their different classification and a separate subject matter for inventive effort. Further, a reference which anticipates any one of the above inventions would neither anticipate or make obvious of the other inventions. Each such invention is capable of supporting its own patent. For these reasons, the restriction requirement is proper.
